

FOR IMMEDIATE RELEASE – October 1, 2009

BOXXER AIRBORNE SURVEY OVER BOSS GOLD-COPPER PROJECT COMPLETE

Calgary, Alberta: Boxxer Gold Corp. (TSX Venture: **BXX**) (“Boxxer” or the “Corporation”) is pleased to announce that it has completed a high-sensitivity airborne geophysical survey over the Boss copper-gold and gold project located in the Goodsprings Mining District, southwest Nevada.

Fugero Geophysical Surveys Limited completed the airborne survey consisting of 1,094 line kilometres. The survey collected high sensitivity magnetic, radiometric and electromagnetic data; survey lines were spaced at 100 metres.

Elmer Stewart, Boxxer President and CEO stated, “the airborne survey is important to the understanding of the processes responsible for the formation of the mineral deposits that occur throughout the Goodsprings Mining District. We believe that the numerous zones of copper-gold mineralization outlined to date in skarn is related to a buried copper-gold porphyry and the data received will assist in targeting a detailed follow-up of the most interesting targets.”

Preliminary interpretation of the data is underway and includes all aspects of the geology of the property including lithologies, intrusives, skarn, structure and mineralized zones, before the final interpretation is completed. The final interpretation of the data collected by the airborne survey is expected to be completed before the end of October.

Upon receiving the final interpretation, Boxxer plans to complete a detailed ground follow-up of any anomalies identified by the survey.

About Boxxer Gold Corp.

Boxxer Gold is a Canadian junior resource company involved in the exploration of three copper-gold projects in the state of Nevada, and a shear hosted gold project located 110 kilometres north of Yellowknife NWT, Canada.
